

Dr. Shinn leads the GIIA (Global Issues Integration Advisors) team supporting Chevron businesses on 6 continents in developing new energy resources in an environmentally- and socially-effective manner.

Following over 15 years of new energy technology and clean fuels research and development, he turned his attention to climate change and sustainable development issues in the late 1980s. Since this time he has served in multiple leadership roles including:

- Supporting the formation of Chevron's internal greenhouse gas management systems.
- Chairing the petroleum industry's IPIECA Climate Change Working Group.
- Steering World Bank efforts organizing and operating a global public-private partnership to address natural gas flaring.
- Providing greenhouse gas reduction and carbon trading policy advice to governments around the world.
- Advising the Clean Development Mechanism Executive Board on effective means to promote greenhouse gas reduction project activities, and
- Serving on the Governing Board of Engineers Without Borders.

He holds a PhD in Chemical Engineering from the University of California, Berkeley.
